epitomee® weight management capsule

FDA-cleared. Drug-free. Prescription-only. Clinically proven.

A new non-drug option for weight health

Epitomee fills the gap between lifestyle programs and drug therapy — for the 70M+ Americans who need more support.

HOW IT WORKS

Ingesting
Swallow one capsule with two 8-oz glasses of water, 30 minutes before lunch and dinner.

Expanding
The device inside absorbs water and gently expands into a triangle shape in the stomach.

Satiating
The expanded triangle presses on stomach walls, signaling fullness to the brain.

Disintegrating
After several hours, the capsule breaks down completely in the small intestine and is naturally cleared from the body.

CLINICAL EFFICACY

Early responders (participants who lost ≥2% of body weight by week 8) achieved an average **9.3% weight loss** at 24 weeks.[1]

Waist circumference reduced by an average of **2–3 inches** (6 cm) over 24 weeks.[2]

Metabolic improvements observed in prediabetic participants, including improved insulin sensitivity (HOMA-IR scores) compared to placebo.[2]

Favorable safety profile is maintained during extended use.[3]

THE VALUE

Addresses GLP-1 gaps
Ideal for employees with BMI 25–30 who don't qualify for or can't tolerate GLP-1 therapy.

Lower cost alternative
Drug-free means no ongoing prescription drug spend. Effective weight management without medication costs.

Proven long-term results
Waistline reductions and weight loss maintained through 48 weeks in the ELECT extension study.

Improved metabolic health
Participants with prediabetes showed reductions in insulin resistance, reducing potentional downstream diabetes risk.

Quality of life gains
Epitomee users showed significantly greater improvements in Physical Function and overall quality of life vs. placebo.

SAFETY PROFILE

Zero
related serious adverse events in clinical trials

Effective results without risk
Reported adverse events similar between Epitomee and placebo groups

Non-systemic
Does not enter the bloodstream

No hormones
stimulants, or appetite suppressants

Biodegradable
Naturally cleared from the body

Prescription-only
Prescribed and supervised by a licensed HCP

WHO IS IT FOR?

Indicated for adults with BMI 25–30 kg/m², used alongside diet and physical activity. Prescribed by healthcare providers.

Employees who can't use GLP-1s
BMI 25–30 without weight-related comorbidities — a large, underserved group ineligible for current drug therapies.

Post-GLP-1 maintenance
Patients who completed GLP-1 therapy and are seeking an additional weight management tool

GLP-1-intolerant patients
Individuals who cannot tolerate GLP-1 side effects or have contraindications.

Lifestyle-exhausted members
Employees burned out on diets and need additional effective and safe weight management tools.

Important Safety Information

Epitomee® Capsule, FDA cleared, Rx Only, is indicated to aid weight management in adults with excess weight or obesity, Body Mass Index (BMI) of 25–40 kg/m², when used in conjunction with diet and exercise. Contraindicated during pregnancy and in individuals with known allergic reactions to its components. See instructions for use for full safety information. Manufacturer: Epitomee Medical, 17 Hatochen St. Caesarea 3079892, Israel. MRK-009 (Rev. 0, Jul-25).
